

CEILING FANS

CHOOSING THE RIGHT FAN SIZE

To choose the right fan size, measure the floor area of the room where the ceiling fan will be installed and look up the suggested fan size from the guidelines below. Consider installing more than one fan for larger air movement coverage.

Room Dimensions (m ²)	Suggested Fan Size (mm)
Up to 7	700 - 900
7 - 13	900 - 1000
13 - 20	1000 - 1120
20 - 27	1120 - 1370
27 - 34	1370 - 1520

REGULATION REQUIREMENT

The Australian/New Zealand Standard requires that a fan should be installed so the blades are more than 2.1 metres from the floor. If ceiling is higher than 3 metres, consider using an extension rod.

Fan should be installed by a Licensed Electrician.

ENCLOSED OUTDOOR INSTALLATION

If the fan is to be installed in a covered outdoor area, the fan should be placed at least 1.5 metres from the edge of the roof or eaves of the enclosure. This will keep the fan away from direct rain, water and sunlight, as well as indirect water splashing which may cause damage to or expedite deterioration of the fan motor and exteriors.
